SAFETY . QUALITY . DURABILITY

Quality Engineer (Quality Manager Designate) - Full-Time, Permanent.

GuS Periscopes Ltd is a UK subsidiary of a market leader that has served global defence markets for more than 40 years. Our products protect and save human lives. We are currently seeking for our start-up design and manufacturing facility a Quality Engineer to be located in our Cwmbran, South Wales facility.

What we offer:

A position with responsibility to ensure the on-time delivery and the quality of standard and bespoke periscope products to fulfil customer orders. You will be responsible for primarily the quality oversight and inspection of optical parts produced throughout our manufacturing processes which include machining, cutting and polishing operations, assembly, and final inspection and test, as well as First Article Inspection Reporting on supplier parts. Your challenge will be to support and continuously help improve the manufacturing processes and whilst managing the quality system, and be part of a small but motivated team to ensure consistent high quality that our customers demand.

You need to have a keen eye for detail ensuring all manufacturing processes are performed according to a set of strict defined procedures and processes. You will be part of the backbone of the business and must be willing to learn and grow with the business often working outside of your comfort zone.

You will find a working environment that offers: -

- Challenging tasks in an international working environment.
- Good long-term growth /career prospects.
- Family-like working environment with respect for a work-personal life balance.
- Continuous learning, development, training and education.
- Competitive remuneration package.

What we are seeking:

- Minimum 5 years quality management system (ISO 9001: 2015) experience.
- Experience in Defence/Automotive/Engineering manufacturing.
- A trained/certified Auditor (preferably Lead).
- Ability to manage Internal, Second Party (supplier) and External (customer) Audits, ensure Audit follow-up corrective and preventive actions defined.
- Ideally complimented with formal engineering/quality qualifications, a member of the Chartered Quality Institute.
- Ability to interpret detailed manufacturing drawings and documentation, use of Measuring equipment and prepared to learn specialised product testing requirements.
- Knowledge and ability of working in accordance with an ISO9001 compliant Quality Management System (QMS).
- Perform awareness and training within the site, according to the Management system, Customer requirements and External Quality standards, ISO, or customers references as required.
- Ensure the review, analysis, and reporting of quality system data to identify trends and corrective and preventive actions as required.
- Report Internal KPI's, performance of the management system and needs for improvement to top management.
- Initiate/participate in working groups of problem solving and continuous improvement methodologies using such tools as: FMEA, 8D (Problem Solving) Reporting, Engineering changes.

- Monitor and report on supplier performance data, identifying negative performance trends, and coordinating improvement programme in support of purchasing.
- Manage the onsite calibration system.
- Manage/oversee First Article Inspection process in support with Design and Development.
- Lead/Support onsite improvement activities in product and process, housekeeping, and visual factory.

Personal Attributes-

- Potential Quality Management material.
- Highly self-motivated.
- Proven problem-solving skills.
- Team player.
- Results-oriented or performance driven.
- Willingness to learn.
- Excellent communication skills.
- Hard working.
